Development team

From left to right

seated: Dave Giroux, Pete Thompson, Betty Pratt and Susan Reynolds

standing: Chris Hebert, Eric Yee, Howard Lu, Aditya Kothekar,

Allen Hadden, Nate Sugioka and Don Grover

This software is being designed to encrypt and secure the information received on mobile devices, allowing for transmission of highly sensitive e-mails. With it, users will be able to set the parameters of all e-mails and documents sent and viewed, including how long and when a user can view the information. It will also be enabled to revoke a user from accessing information and provide an audit trail of who viewed which information and when.
